Apex Systems — Supplier Proposal

Executive Summary

Apex proposes a resilient cloud integration platform with strong security controls for the procurement programme.

Proposed Solution

The solution uses API gateway integrations, event-driven services, horizontal scaling, and a documented disaster recovery design. Architecture review is scheduled before build.

Implementation Plan, Team, and Milestones

Delivery is planned over 20 weeks: discovery (4), build (10), integration testing (4), and rollout (2). A delivery manager, solution architect, security lead, and six engineers are assigned.

Commercial Proposal

Item	Amount
Implementation	$420,000
Annual support	$96,000
Assumption	Client provides identity-provider access

Security, Compliance, and Risk Controls

Controls include SSO, least privilege, AES-256 encryption at rest, TLS in transit, quarterly access reviews, audit logs, incident response, and ISO 27001 certification.

Support, Experience, and References

24/7 severity-one support, named service manager, quarterly service reviews, and three comparable enterprise references are included.
